

BRIGON Gas Service Test Kit

BRIGON Gas service test kit is a composition of useful instruments for testing and servicing of gas burners. Dial thermometer measures flue gas temperature. CO₂ indicator is applied to determine carbon dioxide concentration in Vol% in flue gases on the basis of the Orsat principle. On the calculation scale you can read stack loss and combustion efficiency values for the burner.

You can measure CO concentration by taking a sample from flue gas with the CO tester, after that you can read the CO concentration from the exchangeable CO tester tube. Manometer enables you to test gas pressure.

Delivery content

- CO tester complete with CO tubes and lubricant oil
- CO₂ indicator 0 - 20 Vol % with aspirator assembly and refill liquid
- Dial thermometer 150 mm stem with cone, up to 500 °C
- Manometer 0 – 30 mbar complete with probe and refill liquid
- Stack loss/ efficiency calculator for oil and gas burners
- Steel case

Item no. 1200 BRIGON Gas Service Test Kit, complete

Item no. 1222 BRIGON Gas Service Test Kit, complete, without liquid
