

## BRIGON Smoke Tester

**TÜV By RgG 10**

The smoke test is performed by taking a gas sample from the centre of the gas pipe behind the heat exchanger and crossing it through a special filter paper, where a soot spot is left. The colour of the spot is then compared to the smoke scale, thus the smoke number/smoke index can be determined.

The advantages of BRIGON Smoke Tester are low weight, easy operation and reliable handling.

### **Delivery content**

- Smoke tester
- Filter paper
- Smoke scale
- Lubricant oil

**Item. no 4210**

**BRIGON Skome Tester, Model NAW cpl.  
with smoke scale, filter paper and lubricant oil**
